Date: 2017-03-29
Chair: Ludvig Andersson
Participants: Rasmus Lindgren, Markus Pettersson, Anthony Kalcic, Ludvig Andersson

Meeting agenda

Group 10, Parallax

1. Objectives

- We need to finish the RAD.
- We need to create a more precise class diagram using UML.
- We need to create a first sketch/ simple model in Blender.
- We need to go through all use-cases before considering them finished.

2. Reports from the previous meeting

The group has worked mostly together since the previous meeting, they have during this time finished:

- Deciding what use-cases are relevant, and also creating them.
- Creating a use-case diagram for a clear overview of the project.
- Going through the LibGDX library.
- The domain model.

3. Discussion items

How dependent on the LibGDX library can you/ should you be for this assignment? Should we make the program as dependency free as possible?
- We will need to discuss this issue with our tutor during the meeting on thursday (2017-03-30)

How should we separate the power-up boxes with the active power-ups that the ship gets? (in the domain model) We considered a separation into items and power-ups but need further guidance on both structure and naming convention.
- This is also a question suitable for our meeting on Thursday.

How, when and where to we send in our group contract? How will we create good guidelines when it comes to punishment for not finishing assignments and being late.
- This is a question we will ask after upcoming lectures. We have also left a note in the group contract asking for help with guidelines regarding "punishment". We will update the group contract after receiving feedback.

Date: 2017-03-29
Chair: Ludvig Andersson
Participants: Rasmus Lindgren, Markus Pettersson, Anthony Kalcic, Ludvig Andersson

4. Outcomes and assignments

The RAD need to be finished before the meeting with our tutor (Thursday 2017-03-30), this is going to be done right after this meeting by the group combined.

The last use cases needs to be finished, this will be done by Ludvig and Markus before the same meeting.

A sketch needs to be created and that is going to be done by the group after this meeting.

Everyone needs to go through use cases at home. This will be an individual task and the findings will be reported during the next meeting.

We will ask the questions from 3. together and summarize potentially discuss during the next meeting.

5. Wrap up

We should start working on the class diagram (with UML) until and also during next meeting.

Next meeting will occur Monday 2017-04-03.
